Due: Friday, March 7, 2025

Total: 100 pts

Ankush Das

- This assignment is due on the above date and it must be submitted electronically on Gradescope.
- Please use the template provided on the course webpage to typeset your assignment and please include your name and BU ID in the Author section (above).
- Although it is not recommended, you can submit handwritten answers that are scanned as a PDF and clearly legible.
- You will be provided a `tex` file, named `asn3.tex`. It contains an environment called `solution`. Please enter your solutions inside these environments.

## Derivations and Programs

This assignment will be all about writing derivations and their corresponding programs. For your convenience, I have provided the typing rules of both languages.

## 1 Inference in Constructive Logic [50 pts]

For the following propositions, determine if they are true or false. If the proposition is true, do a (single) derivation with the corresponding program (using the rules above). If the proposition is false, briefly explain why.

1.  $(\tau_1 \wedge (\tau_2 \vee \tau_3)) \Rightarrow (\tau_1 \wedge \tau_2) \vee (\tau_1 \wedge \tau_3)$
2.  $((\tau_1 \Rightarrow \tau_2) \Rightarrow \tau_3) \Rightarrow (\tau_1 \Rightarrow (\tau_2 \Rightarrow \tau_3))$
3.  $\tau \Rightarrow (\tau \wedge \tau)$
4.  $(\tau \wedge \tau) \Rightarrow \tau$
5.  $\tau_1 \Rightarrow \tau_2 \Rightarrow (\tau_1 \wedge \tau_2)$

## 2 Inference in Linear Logic [50 pts]

For the following propositions, determine if they are true or false. If the proposition is true, do a (single) derivation with the corresponding program (using the rules above). If the proposition is false, briefly explain why.

1.  $A \& (B \otimes C) \Rightarrow (A \& B) \otimes (A \& C)$
2.  $((A \multimap B) \multimap C) \Rightarrow (A \multimap (B \multimap C))$
3.  $(A \multimap A) \multimap A$
4.  $A \multimap A \multimap (A \otimes A)$
5.  $(A \multimap (B \otimes C)) \multimap (A \multimap B) \otimes (A \multimap C)$
